REGULATION BULLETIN #2

Registration Plates

Regulation 2.6.2 says that the letters on the registration plate must be “upright”. This means that the short edge of the registration plate must be perpendicular to the ground.

The four images below show the rear view, side view, top view, and tilted view of the registration plate and the region around it that must not contain any part of the solar car.

Any questions with regards to the Regulations should be addressed to the Participant Liaison Officer via email - teams@worldsolarchallenge.org
